Abstract: With the rapid development of society, vehicles have become the most common transportation tool in developed and developing countries. Meanwhile, vehicles are also one of the most effective tools for criminals to commit crimes and the police to crack down upon crimes. In recent years, the number of vehicle-related violent cases has been increasing and the harm caused by vehicles is growing rapidly with each passing day. Therefore, Chinese and foreign police officers make joint efforts to reach the final aims in terms of improving driving skills, lowering risk coefficient, ensuring the police officer's life and effectively coping with different types of terrorist cases. With the comparison of Sino-US driving safety and current training situation, the paper refines the advantages and differences respectively. With the reference to these points, the scientific system of specialized curricula for police drive training can be established and the programmes for police drive training are implemented in the form of separated layer, grading and classification.
